MYCO Operations Manual

1) Plug MYCO into your USB Port.
2) You will see the unit go through a self-test. First it will flash one green led indicating its powered up. Then it will flash all red Leds twice, and finally go steady green. Steady green means its sensing your cabin air.
3) Add this to your pilot panel scan.
4) If C0 levels reach a dangerous level, MYCO will go into wig-wag red flashing Leds.
5) Follow theses steps if you see RED WIG-WAG FLASHING
   1. Turn off the cabin heat.
   2. Open fresh-air vents.
   3. Open your cabin windows.
   4. Land as soon as practical.
   5. Tell ATC.
   6. Get Medical attention.
